

1. Hello, Mosaic

This document exercises the bundled Noto Sans family: every glyph outline ships in the PDF as a subset of a real TrueType font, addressed through a Type 0 CID-keyed font with a /ToUnicode CMap. Copy/paste round-trips back to the source UTF-8 across every script the font covers.

Latin coverage is wide: café culture, §1 legal citations, German Straße addresses, ¶ pilcrows, © copyright marks, curly "smart" quotes, Polish Łódź, Czech Příliš žluťoučký kůň, Hungarian árvíztűrő, Romanian mâine. Math operators ($\leq \geq \neq \sqrt{\partial \sum -}$) and the fi/fl ligatures (real shaping, not a font hack) come through too. The math glyphs aren't in Noto Sans Regular itself — they resolve through automatic per-glyph fallback to the bundled Noto Sans Math cut, mid-word, with no `#set text (font: ...)` ceremony.

Past Latin, the bundled cuts cover Cyrillic — Привет, Мозаика; многоязычный набор — and Greek — Καλημέρα, κόσμε. *Italic emphasis* and **bold** route through the real Italic and Bold cuts of Noto Sans, not faux transforms; the same is true in Cyrillic and Greek emphasis. Documents that need the Adobe Core 14 faces instead can pin them by name (`#set text(font: "Helvetica")`) — that path stays available for byte-stable golden PDFs and goes out through the existing WinAnsi + /Differences encoder.

Lists work in two flavours. Unordered:

- bullets render as a hanging marker in the left gutter,
- *italic* and **bold** flow through unchanged inside an item,
- nested lists shift one indent step further right:
 - inner items still keep the hanging-indent contract,
 - mix and match emphasis here too if you like.

Ordered lists renumber from 1, regardless of the digits typed in source:

1. first step,
2. second step,
3. and a long third step that runs well past the right margin so the line breaker has to wrap it back onto a second line at the same indent as the first — proving the hanging indent survives across wraps.

A tiny bundled PNG, decoded and emitted as a flate-compressed DeviceRGB image XObject.
