

1. Lists

Mosaic recognises two list flavours at the block level. An unordered list is opened by a line starting with `-`; the marker renders as a `•` in the gutter to the left of the item's text, and continuation across line wraps keeps the same hanging indent:

- A short item.
- A longer item that intentionally runs past the right margin so the

greedy line breaker wraps it onto a second line — the wrapped text hangs flush with the first line's left edge, never sliding back under the marker.

- *Italic*, **bold**, and `inline code` flow through unchanged inside an item.

1.1. Nesting

Indenting a marker line by two spaces makes it a child of the most recent item at the outer indent. Indents nest arbitrarily deep, and ordered / unordered lists can mix freely across levels:

- Outer item one.
 - First nested child.
 - Second nested child, with *emphasis*.
- Outer item two.
 - Mixing marker kinds at a deeper level is fine:
 1. ordered grandchild,
 2. and another.
- Outer item three.

1.2. Numbered lists renumber from 1

The digits typed in the source are ignored at render time — the layout engine numbers each item starting from 1, in source order:

1. first step,
2. second step,
3. and a long third step that runs well past the right margin so the

line breaker has to wrap it back onto a second line at the same indent as the first — proving the hanging indent survives across wraps in numbered lists too.

1.3. Wide markers

The gutter sizes itself against the widest marker the list will emit, so long ordered runs don't crash their numbers into the text column:

1. one,
2. two,
3. three,
4. four,

5. five,
6. six,
7. seven,
8. eight,
9. nine,
10. ten,
11. eleven,
12. twelve.
